

## Your All-in-One, Comprehensive COVID-19 Vaccine and Testing Verification Solution

Whether you require vaccine verification, self-administered COVID-19 tests, or a full service, turnkey testing program administered onsite by experienced medical professionals, we offer solutions to keep your people safe and your business compliant with federal, state, and local regulations, including OSHA's Emergency Temporary Standard for COVID-19 Vaccination and Testing slated to go into effect on January 4, 2022.

Our customizable solutions are delivered through one integrated platform that is convenient and easy to use. We offer consolidated reporting on your employees' vaccination and testing compliance so you can manage the health and safety of your people and provide documented evidence of compliance to OSHA and other regulatory authorities.

### Vaccine Verification

Our mobile app (available on both iOS and Android) allows individuals to upload their COVID-19 vaccination cards. We then independently verify the accuracy of the vaccination data through our electronic integration with 6 major health providers and 30 state vaccine registry databases. Because we verify vaccination status from the source, we greatly reduce the potential for fraud and misuse.

### COVID-19 Testing Solutions

We provide both self-administered and professionally administered at home or onsite testing programs that keep your people safe and your company compliant.

We offer a complete self-administration testing solution including the ability to choose from a variety of leading COVID-19 tests including Acon Flowflex, Abbott BinaxNow, Quidel QuickView, and CareStart. Our platform can integrate multiple testing solutions based on availability and integrate new solutions as they become available. We also handle all the logistics. We can ship tests in bulk to you or to individuals – whatever works best for you.

We also offer on demand telehealth proctoring to ensure the integrity of the test result, in accordance with OSHA guidelines. Our trained proctors are US-licensed nurses and are available on demand, 24 hours a day, 7 days a week, through our app. If you prefer an on-site program, we can also staff proctors and other professionals to help your employees manage the program and ensure compliance. We take care of the details, including qualified and trained staff, PPE, and medical waste.

As a licensed CLIA laboratory, we can also administer advanced molecular tests such as Cue Health and Accula. We also have laboratory PCR and saliva testing too.

### One Integrated Solution

Our HIPAA compliant platform tells you what information you need to know to ensure health, safety, and compliance while protecting everyone's privacy and medical information. Our system is flexible and can be customized to your specific needs. Want to add a temperature check to your daily health protocol? We can do that. We can also integrate with your company's security and entry system so that your employees' company badge can allow entry only if they comply with your health requirements. If you prefer, we can even supply temperature scanners with facial recognition that integrates into our platform to do this for you right out the box.
